## DATA SCIENCE AND APPLIED ARTIFICIAL INTELLIGENCE, MS

#### **Data Everywhere**

There has been an explosion of data over the last decade. Everything that people do like listening to music, streaming shows, using social media or rideshares generates data. In fact, almost everything that goes on in the world today is measured and recorded somewhere. Analyzing that data can vastly improve human lives and business performance. So, it's not surprising that analytics are now used routinely even in fields that did not use much data before like the Arts, Music, and Creative Writing. Analytics are also extensively deployed in Business, Engineering and Manufacturing and Government and even in many not-for-profit sectors like education, fundraising and social welfare. It is safe to say that virtually all human activity that affects our lives uses analytics in some way today. Visit this link (https://uwm.edu/data-science/) for more information on how UWM prepares students for careers in data science fields.

# Why should you Consider a Master of Science in Data Science (MSDS)?

With every field turning to data to improve decision-making and performance, Data Science is one of the fastest growing professions today but there aren't enough trained data analysts to fill that need. A Master's degree in Data Science that trains you to analyze data can therefore help you in finding jobs with attractive salaries.

A report from the employment outlook firm Burning Glass produced jointly with IBM and the Business Higher Education Forum identified several job categories in the data science and analytics field, including data driven decision makers ("leverage data to inform strategic and operational decisions") and functional analysts ("utilize data and analytical models to inform specific functions and business decisions"). They estimated a national demand of 1.8 million job postings nationwide for 2020, with a 5-year growth rate of approximately 15%. Importantly, the report also states: "39% of Data Scientists and Advanced Analysts require a Master's or Ph.D. These degrees take additional years of schooling to complete, so it will take a significant time investment to train a larger pool of workers. Therefore, because these roles are already undersupplied and projected to grow rapidly, the skills shortage is in danger of worsening."

The Bureau of Labor Statistics also projects that Computer and Information Research Scientists category of jobs will grow 15% over the 2019-2029 period and describes this as: "...much faster than average for all occupations[1] (p. ). Job prospects are expected to be excellent" and states that the "median annual wage for computer and information research scientists was \$126,830 in May 2020." BLS also classifies this as a category in which most jobs require a master's degree.

Additional evidence of demand is also seen in investments made by employers like Northwestern Mutual that have invested significant resources of \$15 million in the establishment of the Northwestern Mutual Data Science Institute to support the launch and growth of undergraduate and graduate programs related to data including data science and data analytics.

## **Flexible Curriculum**

We understand the needs of working professionals and offer an in-person or online program that will both build your career and enhance your professional networking opportunities. Fulfill your professional goals through a wide selection of courses offered in on-campus, online, and hybrid delivery options.

#### **MS Data Science Courses**

To see a list of current classes available for the MS Data Science degree please see our MS Data Science Current Classes (https://uwm.edu/graduateschool/msds-current-classes/) page.

For a complete listing of ALL classes related to the degree please see the Requirements tab (https://catalog.uwm.edu/graduate-school/datascience-ms/#requirementstext).

## Why UWM?

The MSDS at UWM is unique because its goal is to train graduates to practice data analytics in a field they are most passionate about. For example, if your interest is healthcare, you can become a data analyst in healthcare. If your passion is education, you can get the training to become an analyst in the field of education. The MSDS is therefore designed to give you the flexibility to build a career in data science in whatever field you want. For more information about the M.S. in Data Science program please attend one of our upcoming Information Sessions (https://uwm.edu/data-science/academics/data-science-ms/ information-sessions/).

### **Ready to Apply?**

The Data Science program is a multidisciplinary program. To apply, visit this link (https://uwm.edu/applygrad/).

#### Admission Requirements Application Deadlines

Application deadlines vary by program, please review the application deadline chart (http://uwm.edu/graduateschool/program-deadlines/) for specific programs. Other important dates and deadlines can be found by using the One Stop calendars (https://uwm.edu/onestop/dates-and-deadlines/).

#### Admission

For admission to the M.S. in Data Science and Applied Artificial Intelligence program, students must meet the general requirements of admission to a graduate program at UW-Milwaukee. As stated by the Graduate School, these requirements include: (1) a baccalaureate degree, or its equivalent as determined by the UWM Center on International Education, from a regionally accredited institution, completed before the first term of enrollment in the Graduate School; (2) Proficiency in the English language; and (3) A minimum cumulative undergraduate grade point average (GPA) of 2.75 on a 4.0 scale, or an equivalent measure on a grading system that does not use a 4.0 scale. Applications must include a reason statement, at least one letter of recommendation, and other materials as specified in the graduate application system. Incomplete applications will not be considered.

Students applying to the program are expected to have proficiency, demonstrated through coursework, exams or a portfolio, in the following areas: Linear Algebra (3 credits), Multivariable Calculus (4 credits), Statistics (3 credits), and Computer Literacy (6 credits). Those without these proficiencies may be admitted when they have 6 credits or fewer of the proficiency requirements remaining to be completed, but proficiency coursework does not count towards the MS.

#### **Ready to Apply?**

The Data Science program is a multidisciplinary program. To apply, visit this link (https://admissions.uwm.edu/register/?id=442d088c-4d8a-4572-be4e-00a5267ed73b).

#### **Credits and Courses**

Code	Title	Credits					
Core Areas							
Complete 18 credits; 1 course from each sub-area below:							
Developing insights from a	lata for applications <sup>1</sup>	3					
Complete 1 course:							
ATM SCI 600G	Data Analytics						
COMPSCI 425G	Introduction to Data Mining						
ED PSY 821	Psychometric Theory and Scale Development						
ED PSY 822	Item Response Theory						
ED PSY 823	Structural Equation Modeling						
ED PSY 824	Advanced Experimental Design and Analysis						
ED PSY 825	Multivariate Methods						
ED PSY 826	Analysis of Cross-Classified Categorical Data						
ED PSY 827	Survey Research Methods						
ED PSY 832	Theory of Hierarchical Linear Modeling						
INFOST 582G	Introduction to Data Science						
Organizing and maintainin	g large data sets	3					
Complete 1 course:							
BUS ADM 749	Data and Information Management						
COMPSCI 557G	Introduction to Database Systems						
INFOST 691G	Special Topics in Information Science: (Topic: Data Management and Curation)	)					
INFOST 714	Metadata						
INFOST 785	Database Managment Systems for Information Professionals						
PH 718	Data Management and Visualization in R						
AI and Machine Learning to	o extract insight from Data	3					
Complete 1 course:							
BUS ADM 767	Ideas and Applications of Data Science in Different Fields						
COMPSCI 411G	Machine Learning and Applications						
COMPSCI 422G	Introduction to Artificial Intelligence						
COMPSCI 710	Artificial Intelligence						
COMPSCI 711	Introduction to Machine Learning						

	ECON 710	Applied Econometrics	
	INFOST 687G	Data Analysis for Data Science	
	MATH 804	Industrial Mathematics II	
Pr	obabilistic methods to a	nalyze uncertainty in data	3
С	omplete 1 course:		
	ATM SCI 500G	Statistical Methods in Atmospheric Sciences	
	ATM SCI 700	Statistical Methods in Atmospheric Sciences II: Signal Detection	
	BUS ADM 754	Statistical Analysis	
	BUS ADM 713	Business Forecasting Methods	
	BUS ADM 714	Multivariate Techniques in Management Research	
	BUSMGMT 709	Predictive Analytics for Managers

<sup>1</sup> The ED PSY courses in this category can either count in the *Developing Insights* category or as elective courses. There is no double counting of ED PSY courses.

- <sup>2</sup> INFOST 691 (Topic: Artificial Intelligence and Disruptive Technologies) may also be used as an elective. Every student's program of electives must be approved by the program director; students may be able to count as Electives some courses in the "core" categories not applied to the core requirements (subject to Director's approval). Students wishing to apply other courses not listed here towards these electives must have each course approved by the program director.
- <sup>3</sup> One of the ED PSY elective courses can be taken as a *Developing Insights* course. There is no double counting of ED PSY courses.
- <sup>4</sup> Of the required 12 elective credits, up to 3 degree credits may be awarded for a thesis or internship. Students who choose this option must complete a relevant thesis or internship that is approved by the program director. Students who choose to complete a thesis must work with a thesis advisor and have the thesis approved by the advisor and the program director. Students who choose to pursue an internship must also obtain approval from the program director. Students may select from courses such as those listed in the table or enroll for thesis credits with their thesis advisor (in the advisor's department).
- <sup>5</sup> Students who do not choose to pursue the optional capstone course/ thesis/internship option are required to pass a qualifying exam. During this exam, students are given a data set and a research problem to be addressed with the data, using data science techniques. Students must submit a final report in which they use the provided data set to address the research question and demonstrate that they have developed a

sufficient level of expertise to work as a data scientist. This is a takehome exam.

#### Additional Requirements Major Professor as Advisor

Admitted students are assigned a faculty advisor who will work with the student to assemble a program of study.

#### **Time Limit**

The student must complete all degree requirements within five years of initial enrollment.

#### **Data Science MS Learning Outcomes**

Students in the M.S. program in Data Science will:

- 1. Develop insights from data, for applications.
- 2. Learn how to work with large data sets.
- 3. Gain experience in advanced computer programming for data science.
- 4. Become skilled in specific areas of data science such as artificial intelligence and machine learning.
- 5. Understand how to deal with uncertainty which is an inherent characteristic of data science.
- 6. Recognize and internalize the importance of ethical use of data and data science.
